

Digital Signature Kit for Laserfiche®

Cities Digital's Digital Signature Kit for Laserfiche allows users to select documents and sign using a digital signature pad. The signature may be placed on any page of the document and sized appropriately to fit in any space. A date/time stamp may also be applied. All signatures are logged in the Audit Trail and a second signed version is automatically linked to the original unsigned version. Optionally the application may be configured to overwrite the unsigned document.

Digital Signature Kit includes the following features for instant document approval:

- Integration opens by clicking the toolbar button within Laserfiche while a document is selected.
- Includes one (1) Epadlnk pad & application for use with Laserfiche 8.
- Allows for placing the signature on any location within a document.
- Includes a date/time stamp.
- Laserfiche Audit Trail is used to track the history of the digital signatures.
- Digital signatures can overwrite the original document, or create a new version of the signed document.
- Updates template data upon completion of signature.

- Saves a profile and signature template setup for frequently signed document types.
- Automatically links unsigned document versions to the newly signed version.

By applying a digital signature, documents are processed faster and authentication is assured by Windows AD authentication. Licensing is workstation based. The Digital Signature Kit comes with digital signature pad hardware.

Contact your Cities Digital Account Representative for more information about Cities Digital's Digital Signature Kit for Laserfiche.
